

How to Display WooCommerce Product Pricing via Shortcode

<https://orbisius.com/blog/how-to-display-woocommerce-product-pricing-via-shortcode/>

WooCommerce has lots of shortcodes but it doesn't have one to display pricing.

The code below will render the product price that's currently loaded OR if you pass the ID of a specific product.

```
<?php
```

```
add_shortcode( 'orb_wc_product_price', 'orb_custom_shortcode_wc_product_price' );
```

```
/**
```

```
 * Shortcode to display WooCommerce Product Price
```

```
 * [orb_wc_product_price]
```

```
 * Modified by Orbisius to auto-detect product ID if not passed.
```

```
 * Original code by Aashik P - a11n (@aashik) posted on WP org forums
```

```
 * @see https://wordpress.org/support/topic/product-price-shortcode/
```

```
 */
```

```
function orb_custom_shortcode_wc_product_price( $atts ) {
```

```
    if (!function_exists('wc_get_product') || !function_exists('get_queried_object_id')) {  
        return "";
```

```
    }
```

```
    $atts = shortcode_atts( array(  
        'id' => null  
    ), $atts, 'orb_wc_product_price' );
```

```
    if (empty($atts['id'])) {  
        $atts['id'] = get_queried_object_id();  
    }
```

```
    if ( empty( $atts[ 'id' ] ) ) {  
        return "";  
    }
```

```
$product = wc_get_product( $atts['id'] );

if ( ! $product ) {
    return "";
}

$price = $product->get_price();
$price_fmt = wc_price($price);
$price_html = $price_fmt;

// sometimes it shows an incorrect value
// $price_html = return $product->get_price_html();

return $price_html;
}
```

usage:

[orb_wc_product_price] or [orb_wc_product_price id=123]

Installation

To use this code it's highly recommended that you create a system plugin.

This is a plugin that's created in /wp-content/mu-plugins/ folder. It is automatically active.

If you use a WordPress child theme you can paste the code in the functions.php.

Skip the <?php of the code if you're appended to an existing php file.

Do you need a quick way (seconds!) to set up a test WordPress site? Then you need to check out [qSandbox](#) now.
