

Zend Studio: svn: This client is too old to work with working copy

<https://orbisius.com/blog/zend-studio-svn-this-client-is-too-old-to-work-with-working-copy/>

If you are using Tortoise SVN and Zend Studio on Windows machine you may encounter this error message:

"svn: This client is too old"

Zend Studio ships with a cvs and svn clients which allows you to commit directly from the editor.

However, when you start using TortoiseSVN and perform an update to a checked out code TortoiseSVN

will update the format of .svn files.

That's why you see "svn: This client is too old to work with working copy".

Solution:

Download and Install [CollabNet Subversion Command-Line Client for Windows](#)

Tell Zend Studio that you want to use a different svn binary.

Go to Tools -> Preferences -> Source Control

[General Settings]

change old:

C:\Program Files\Zend\ZendStudio-5.5.1\bin\SourceControl\svn\svn.exe

to:

C:\Program Files\CollabNet\Subversion\svn.exe

Note:

Please note that you need the SVN client, not the Server ;)
